

DDI on Rails

Understanding Data

The **German Socio-Economic Panel (SOEP)** is a wide-ranging representative longitudinal study of private households, located at the German Institute for Economic Research, DIW Berlin. Every year, there were nearly 11,000 households, and more than 20,000 persons sampled by the fieldwork organization TNS Infratest Sozialforschung.

The data provide information on all household members, consisting of Germans living in the Old and New German States, Foreigners, and recent Immigrants to Germany. The Panel was started in 1984.

Some of the many topics include household composition, occupational biographies, employment, earnings, health and satisfaction indicators.

The vision

The data portal DDI on Rails accompanies researchers throughout the entire course of their research projects from conception to publication/citation.

The system offers researchers the possibility to explore the SOEP data, to compile personalized datasets, and to publish results on the publication database.

Characteristics

- study-independent
- open-source
- document data with multiple versions/distributions
- document the specific characteristics of a longitudinal study
- is easy to use

DDI on Rails = DDI + Ruby on Rails

Standard

Data Documentation Initiative

- DDI Codebook (2.x): Import
- DDI Lifecycle (3.x): "Framework"

Technology

- Ruby / Ruby on Rails
- R (r2ddi)
- SQLite / Postgres
- Apache Solr (Lucene)
- jQuery and D3
- Bootstrap CSS
- Apache (Passenger) on Linux

Overview

The German Socio-Economic Panel Study (SOEP) is a wide-ranging representative longitudinal study of private households, located at the German Institute for Economic Research, DIW Berlin. Every year, there were nearly 11,000 households, and more than 20,000 persons sampled by the fieldwork organization TNS Infratest Sozialforschung.

The data provide information on all household members, consisting of Germans living in the Old and New German States, Foreigners, and recent Immigrants to Germany. The Panel was started in 1984.

Some of the many topics include household composition, occupational biographies, employment, earnings, health and satisfaction indicators.

Services of the Research Data Center SOEP

- SOEP data are disseminated in several formats on one DVD, accompanied by extensive documentation (also available on our documentation sites), both as raw data and in SAS, STATA and SPSS formats. Geo-Code context data can also be accessed at DIW Berlin. Training workshops for SOEP users are held annually in Germany and abroad.
- A remote access to sensitive regional data in the SOEP data set.
- The interactive program SOEPinfo provides information on all SOEP variables as well as data extraction programs.
- All registered users and interested persons receive a SOEPnewsletter with information on the latest developments in SOEP. You can download the newsletter directly or register to be placed on the newsletter mailing list.

Where People Live and Die Makes a Difference: Individual and Geographic Disparities in Well-Being Progression at the End of Life

Gerstorf, Denis, Nilam Ram, Jan Goebel, Jürgen Schupp, Ulman Lindenberger, and Gert G. Wagner

2010

Lifespan psychological research has long been interested in the contextual embeddedness of individual development. To examine if and how regional factors relate to between-person disparities in the progression of late-life well-being, we applied three-level growth curve models to 24-year longitudinal data from deceased participants of the German Socio-Economic Panel Study (N = 3,427; age at death: 18 to 101 years). Results indicate steep declines in well-being with impending death, with some 8% of the between-person differences in both level and decline of well-being reflecting between-county differences. Exploratory analyses revealed that individuals living and dying in less affluent counties reported lower late-life well-being, controlling for key individual predictors including age at death, gender, education, and household income. The regional factors examined did not directly relate to well-being change, but were found to moderate (e.g., amplify) the disparities in change attributed to individual factors. Our results suggest that resource-poor counties provide relatively less fertile grounds for successful aging until the end of life and may serve to exacerbate disparities. We conclude that examinations of how individual and residential characteristics interact can further our understanding of individual psychological outcomes and suggest routes for future inquiry.
